

Millboard Product Profile

Multi Spacer

The Multi Spacer tool is used to provide a uniform 3, 4, 5 or 6mm gap between deck boards to achieve a beautiful finish.

Product features

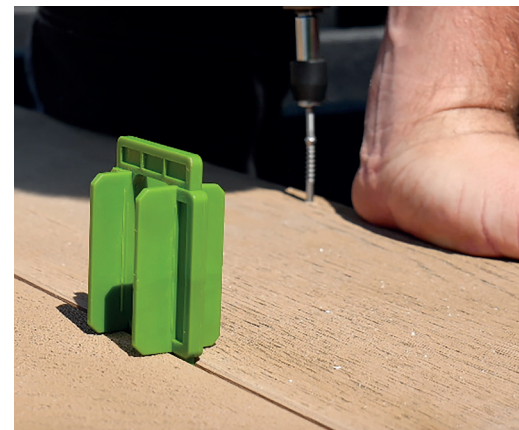

- ➔ **Versatile**
4-widths-in-1 (3, 4, 5 and 6mm) makes it easy to adjust the width of space to maintain or correct the line of boards
- ➔ **Tough**
Made with tough, glass filled PP for extra durability which won't break if stepped on
- ➔ **Easy to use**
Indents in tab denote even spacing, with a hollow design for easy removal
- ➔ **Multi-use**
Can be used on all decking types, with multiple dimensions along one side of the board
- ➔ **Faster**
Takes the guesswork out of spacing for an easier, faster installation
- ➔ **Professional**
Designed by installers, for installers

The tool facilitates a faster, more accurate install to produce a perfect decking arrangement.

For best results, use a 4mm space between deck boards, then use the other size blades on the tool to account for those small irregularities in widths that occur from the hand-moulded effect.

Before fixing individual boards in place, we recommend a spacer is inserted between the boards above every alternate joist.

This will result in beautifully consistent decking lines, even across large installations.

“

The Multi Spacer has been a great addition to the Millboard range, making it even easier to achieve a perfect deck that our customers are thrilled with.
